

Endpoint Management

Improve uptime, protect business critical operations and better manage hardware costs with strategic endpoint management. **Minimise the threat of endpoint misuse or targeting by malicious threat actors**, with total visibility of your endpoint estate at any one point. It's continuity at a predictable cost.

- ISO27001 accredited for data management
- UK helpdesk and engineers available 24/7
- Partnered with Microsoft, Dato, Veeam, N-Able and more
- Focus on driving business value from hardware investment

Lifecycle management

Governance of an endpoint being approved for use through to it being phased out or upgraded. Sentis retains visibility of an endpoint's performance and closely monitors when to make a change based on security risk or productivity impact.

Performance monitoring

Enhance business productivity and service delivery. Precise and comprehensive collection of all endpoint data allows for proactive troubleshooting and optimisations, all while reducing time to repair – a key measure of endpoint performance.

Inventory management

Know exactly where and how all hardware is being used, even in remote locations, to understand where risk and value is being added. Sentis automates IT hardware tracking and shares data in a single environment.

Vulnerability and compliance management

A proactive and continuous assessment of the risks your business is exposed to, with findings delivered in real time. Compile findings and advice regarding endpoint security to stay protected from targeted attacks.

OS Patch Management

Guard against vulnerabilities across every operating system, on every machine in your network. Security patches, bug fixes and feature updates are regularly performed by our engineers and approved automated tools.

Policy Enforcement

Minimise the risk of user error compromising endpoints. Sentis designs, implements and enforces endpoint security policies, with strict, automated user and process defined rules controlling how endpoints are used.
