

Managed Networking

Help your customers achieve greater agility and productivity with super-fast, expertly integrated telecoms solutions for every business communication. With flexible backup options to ensure high telecoms availability, and tailored configurations that maximise investment in existing infrastructure.

- ISO27001 accredited for data management
- UK helpdesk and engineers available 24/7
- Partnered with Microsoft, Dato, Veeam, N-Able and more
- Focus on driving business value from connectivity

Business Connectivity (LAN, WAN, MPLS)

Robust, flexible Internet configured to performance needs. Combine broadband and Ethernet, prioritise traffic and connect hybrid workers.

Voice and Telephony (Teams, 3CX and Gamma Horizon)

Enable anywhere, any device external calling within the Microsoft 365 environment, or access a complete suite with contact centre capabilities.

Application networking

Improve the security posture, performance and reporting visibility of network architecture. Connect apps, data and devices without any single point of failure.

Managed Networking

Ensure high availability, demand management and risk mitigation with continued maintenance of networks. Includes change management, switch and firewall configuration.

SD-WAN Connectivity

The flexibility to leverage a range or combination of telecoms transport services, for secure remote connection to applications. Ideal for distributed workforces.

Business Grade Internet

Gold standard connectivity for superfast business WiFi, with scalable and reliable performance. Architecture design, install, and maintenance from Sentis.

Cloud Connectivity

Extend your on-premises or virtualised environments into public cloud. Secure, high performing connections providers including Azure and AWS.

Mobile Backups (FTTC and 4G)

Cost-effective backup access to fibre optic broadband over 4G. Fast speeds in the event of chosen telecoms failure to deliver an essential business continuity function.
